What this session is about

This session is about prompt engineering

True

False

This session is about what AI is

True

False

This session is about a particular tool

True

False

This session is about managerial control of AI implementations

True

False

You're going to have to work in groups

True

False

Generative AI Test

AI generally knows more than we do

True

False

AI will take away our jobs

True

False

The best AI runs by itself

True

False

If you don't jump fully into AI implementation, your company is in trouble

True

False

Amazon's Recruiting AI—A Lesson in Algorithmic Blind Spots

- Vision: Sift through thousands of resumes
 - Identify top talent
 - Accelerate recruitment with machine precision
 - Trained on ten years of internal hiring data
- Effect: consistently ranked male candidates higher
 - Penalized terms like “women’s chess club captain”
 - Penalized all-women colleges
- Reason:
 - Old data reflecting gender imbalance
 - No guardrails or bias mitigation techniques
 - No fairness audits
 - No data diversity reviews
 - Too much trust in the AI algorithms
 - Little governance

Tesla's Autopilot Crashes—When Partial Autonomy Meets Real-World Complexity

- Vision
 - Autopilot to drive the car more safely and easily than a person could do
- Effect: Self-driving caused several high-profile crashes
 - Autopilot failed to detect stationary vehicles
 - misread road markings
 - struggled with unpredictable environmental conditions
- Reason
 - Little governance
 - Insufficient edge cases
 - Arrogant assumptions about driving's difficulty
 - Lacking human in the loop situations
 - Messaging amplified capabilities over constraints
 - Too much trust in AI

AI Governance at an organizational level

The Challenge

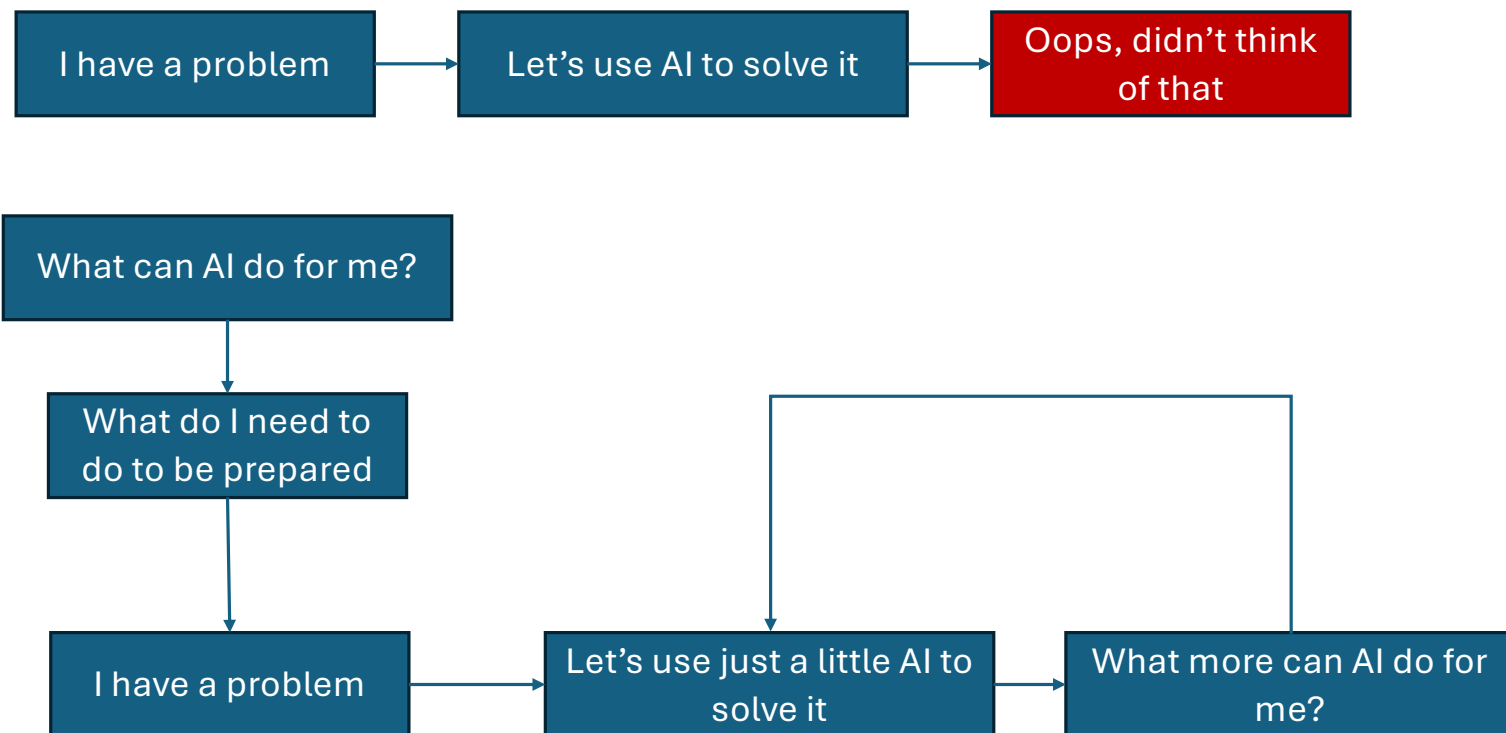

For organizations implementing AI initiatives across the enterprise, there are many risks, such as strategic misalignment, technical debt, and unintended consequences.

The Solution

We need a way to control AI initiatives with proven, safe, and practical guidance.

The control must be based on evidence-based research on how to position tools, roles, and activities to help organizations progress methodically and safely when applying AI

Reverse the way you look at a problem

Where do we start implementing AI?

Should we start with the most AI can do

Yes

No

We should use as much AI as we need as soon as we can

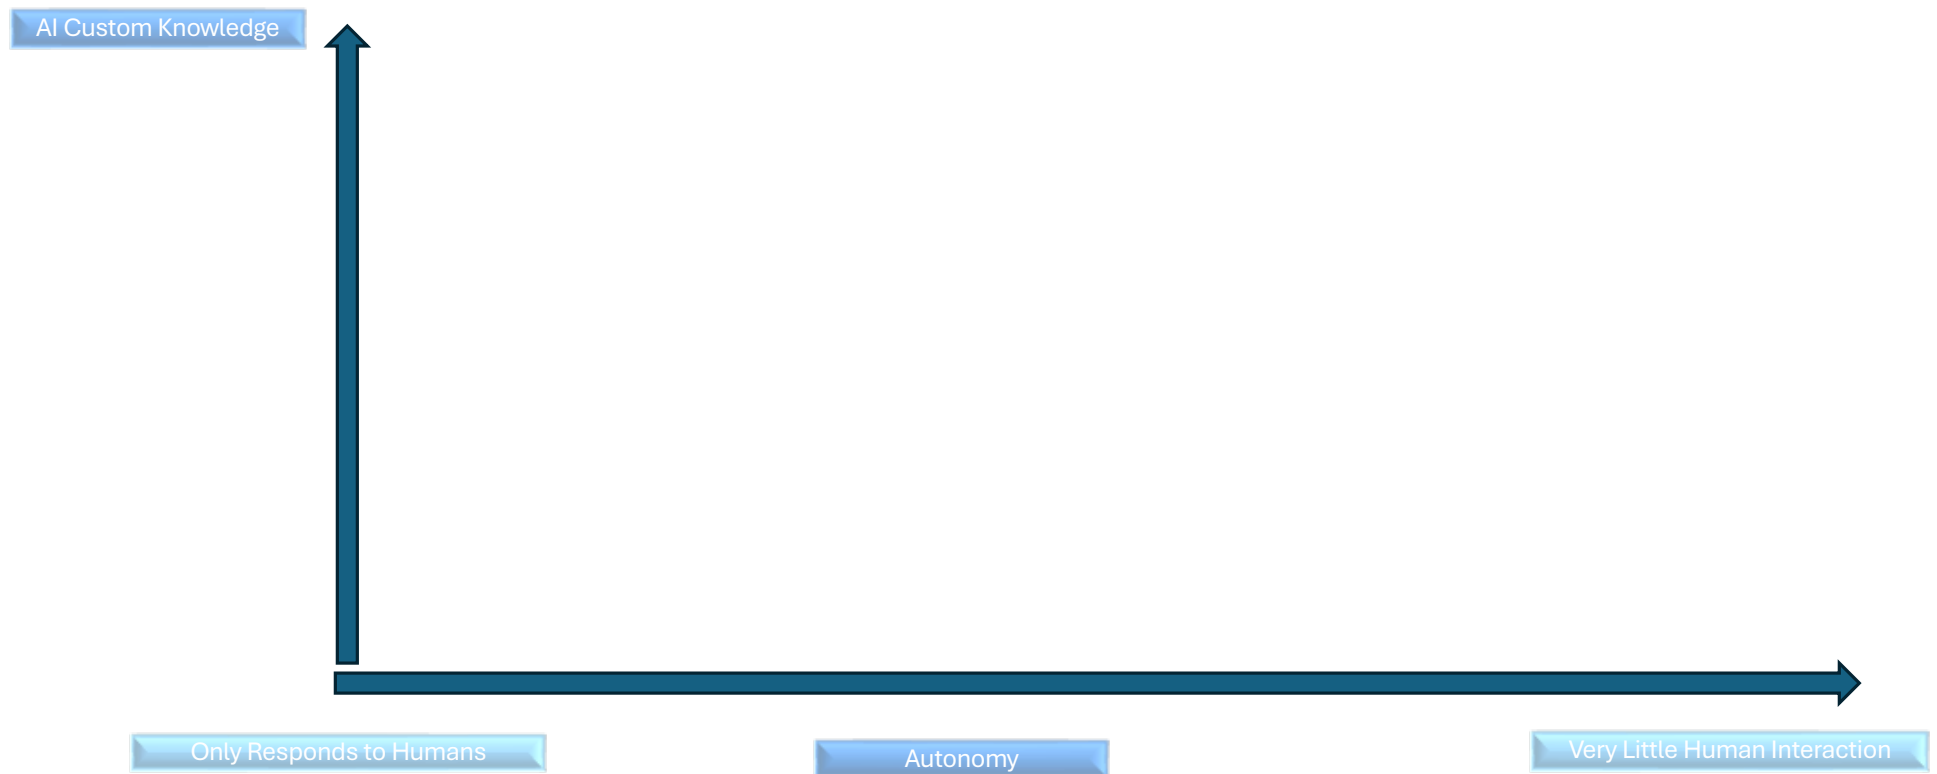

Yes

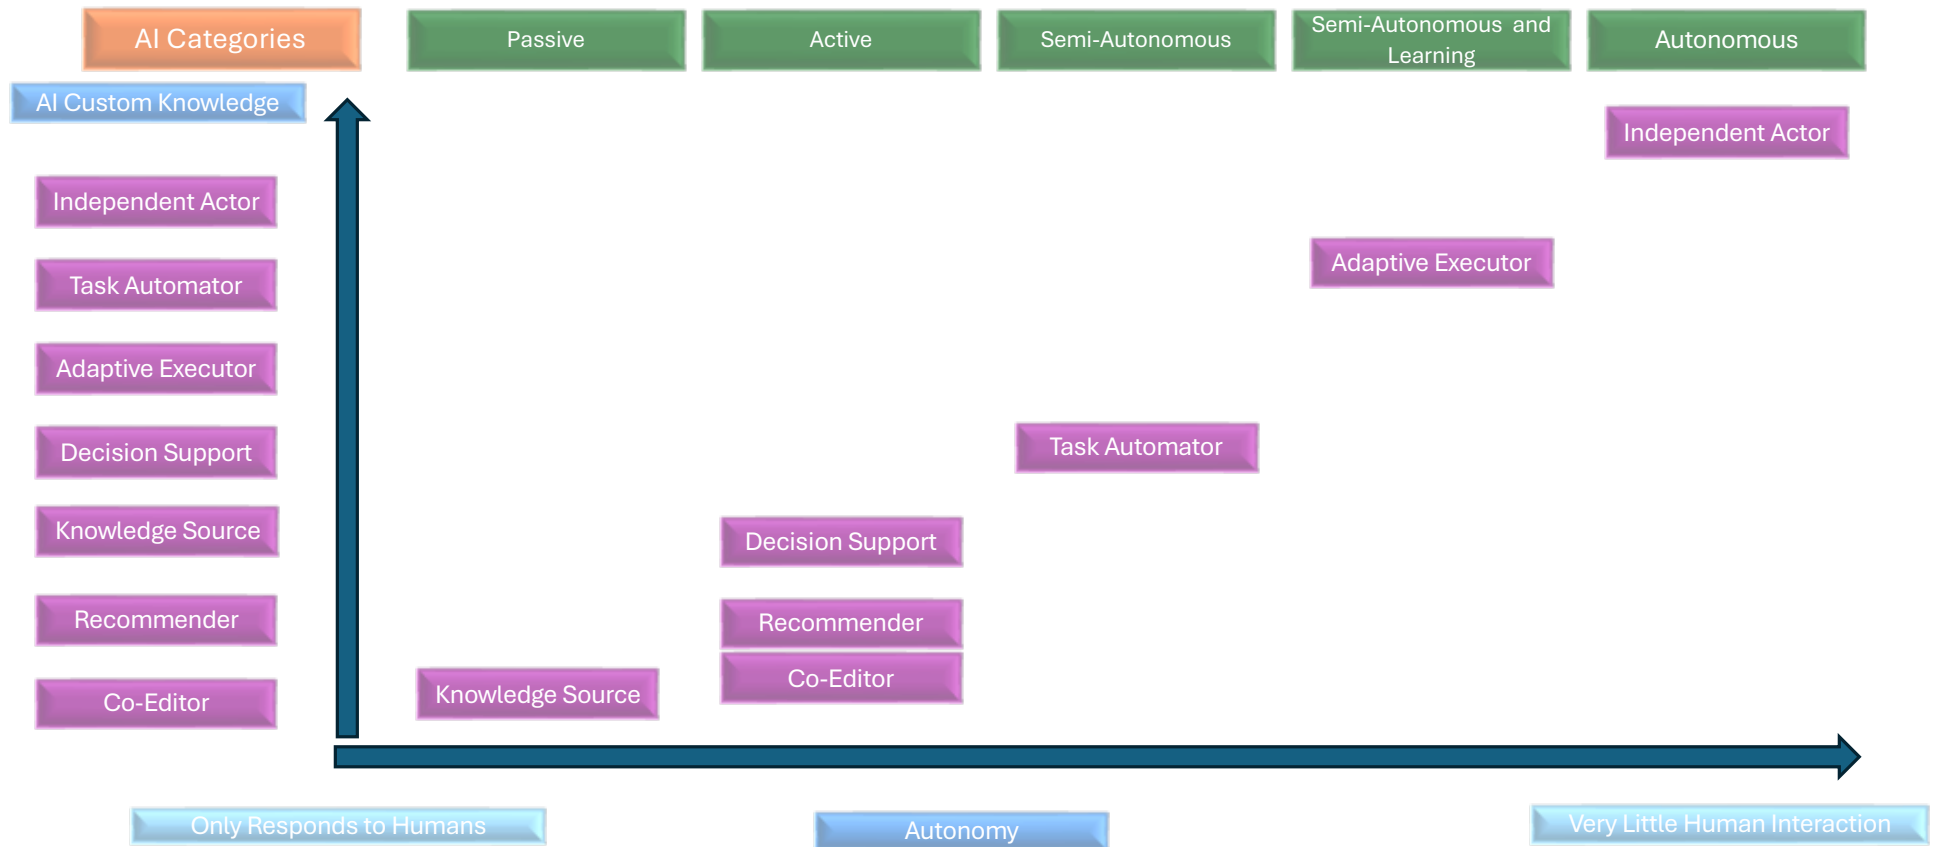

No

What can AI do for us?

Application Capabilities of Generative AI

How do you know when you're ready

We can move to more AI after a month or two

Yes

No

Maturity is capability-based, not time based

Yes

No

Capabilities Drive Appropriate AI Application

AI Categories

Passive Active Semi-Autonomous Semi-Autonomous and Learning Autonomous

Application Categories

Baseline Business Assistance Process Automation Decision Optimization Autonomous Execution

Risk →

Manage Risk Through Organizational Capabilities

Not using AI formally	Curious but unstructured	Structured experimentation	AI as a business enabler	AI embedded in operations	Continuous AI at scale
Baseline	Exploring	Applying	Formalizing	Optimizing	Leading

Do you want to lose weight?

Bathroom scales can tell you your ideal weight

Yes

No

Bathrooms scales can tell you how to loose weight

Yes

No

Bathroom scales typically can give you data but not guidance

Yes

No

A good weight loss program evaluates your weight and gives actionable guidance across several areas

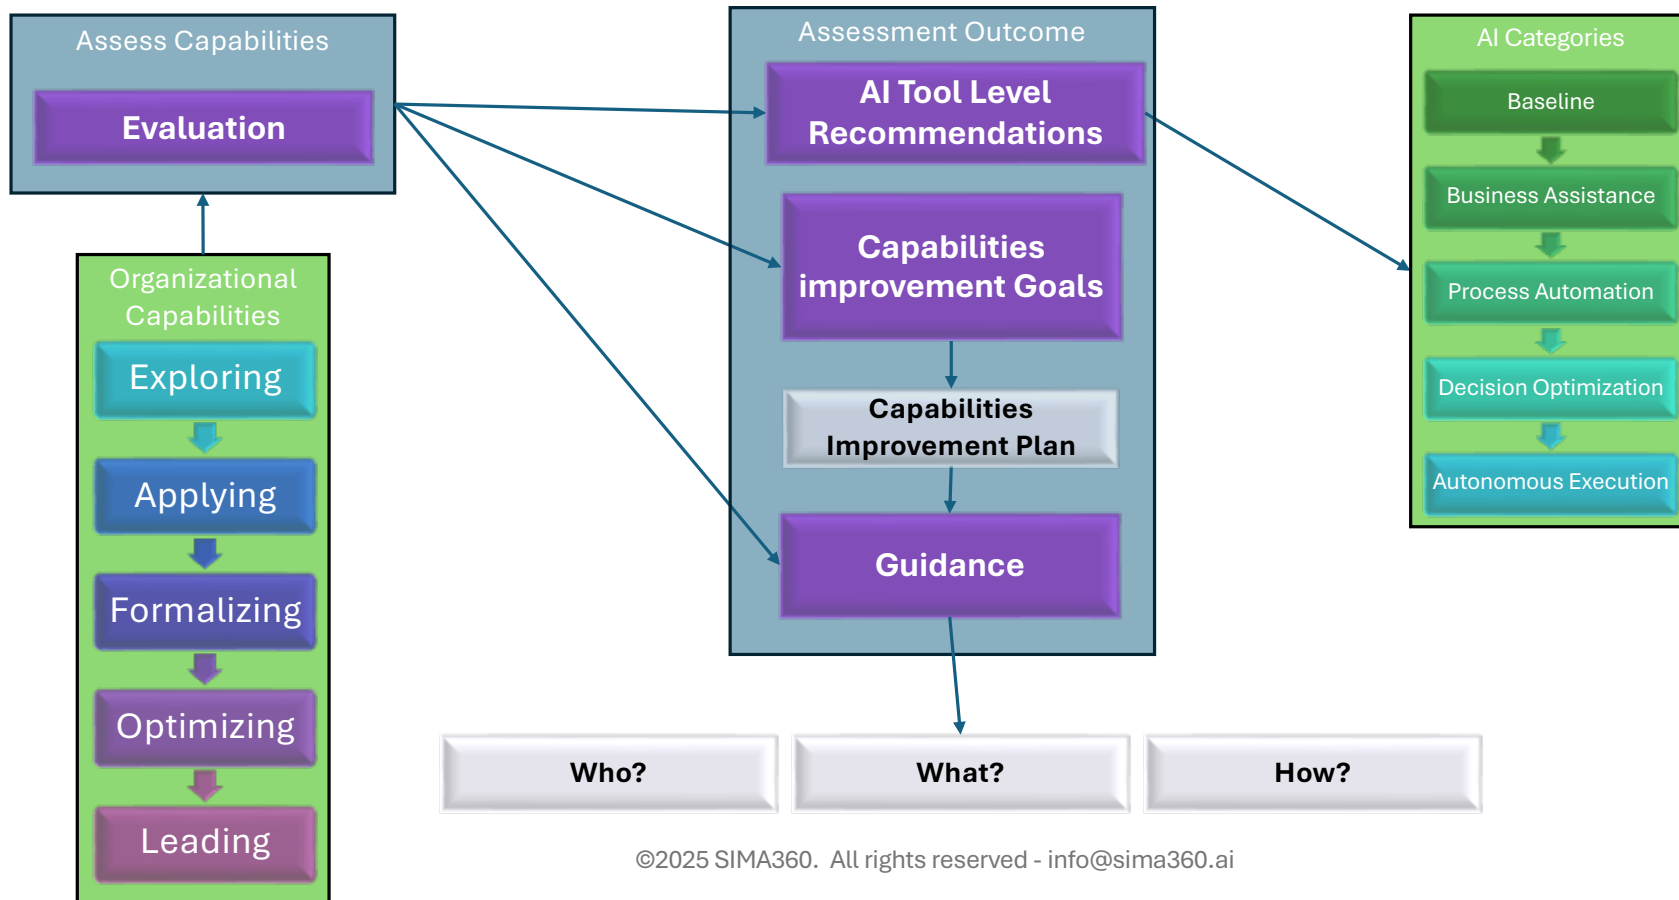

Yes

No

Applying Organizational Capabilities

Categorize the Guidance

Guidance Focus		Strategy	Governance	People	Data	Technology
Oversight	AI Tool		Oversight			AI Tool
Long Term Objective	Culture	Long Term Objective		Culture		
Gather Data	Infrastructure				Gather Data	Infrastructure
Business Alignment	Manage Data	Business Alignment			Manage Data	
HR Structure	Accountability		Accountability	HR Structure		
Funding	People Skills	Funding		People Skills		
Evaluate Data	Ethical standards		Ethical standards		Evaluate Data	

Do you like that guidance?

Even that's too much in one big grouping

Yes

No

I need a way to organize the guidance

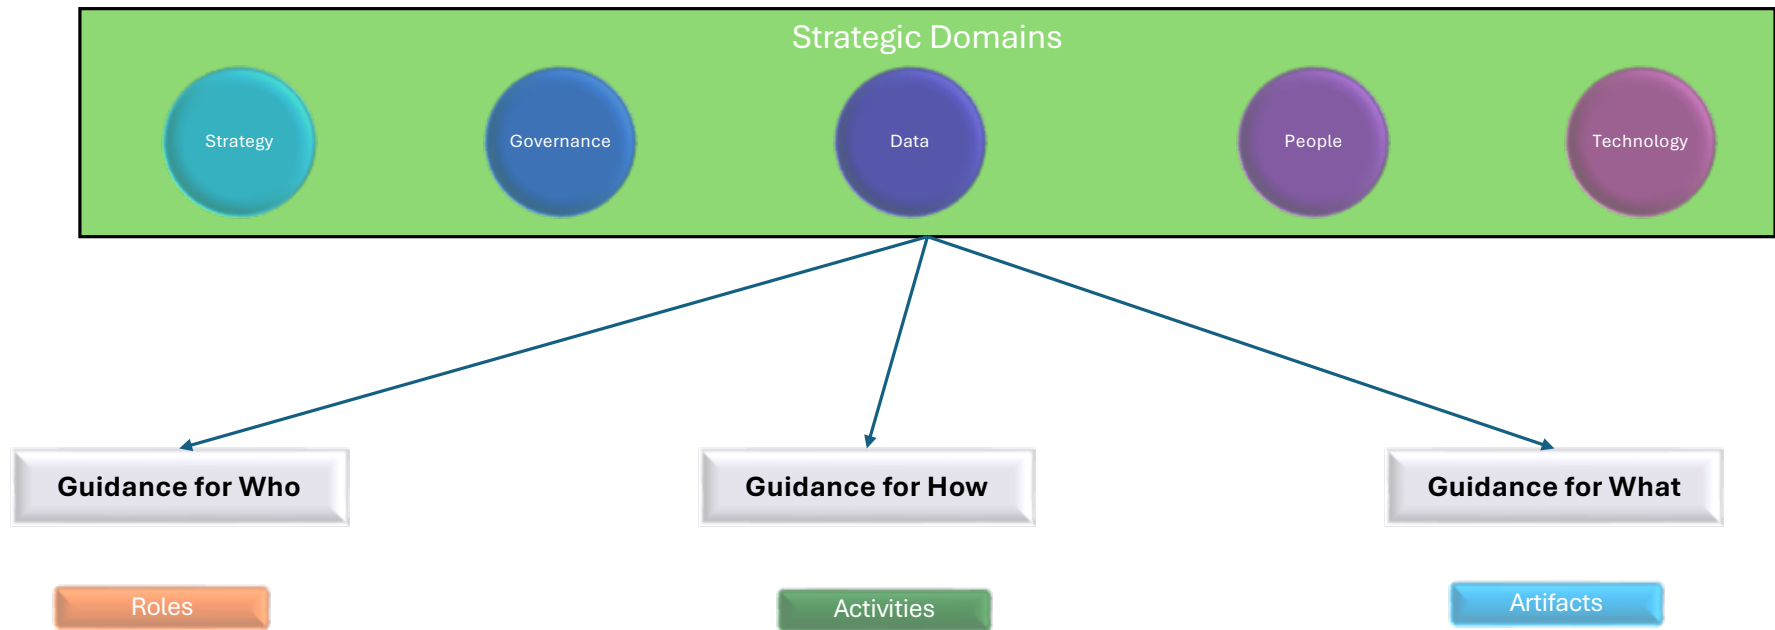

Yes

No

Strategic Domains

What do I do with it all?

Plan it all out, like God and PMI commanded!

Yes

No

Use Scrum and agile

Yes

No

Use a cyclical approach

Yes

No

Use an out of the box approach

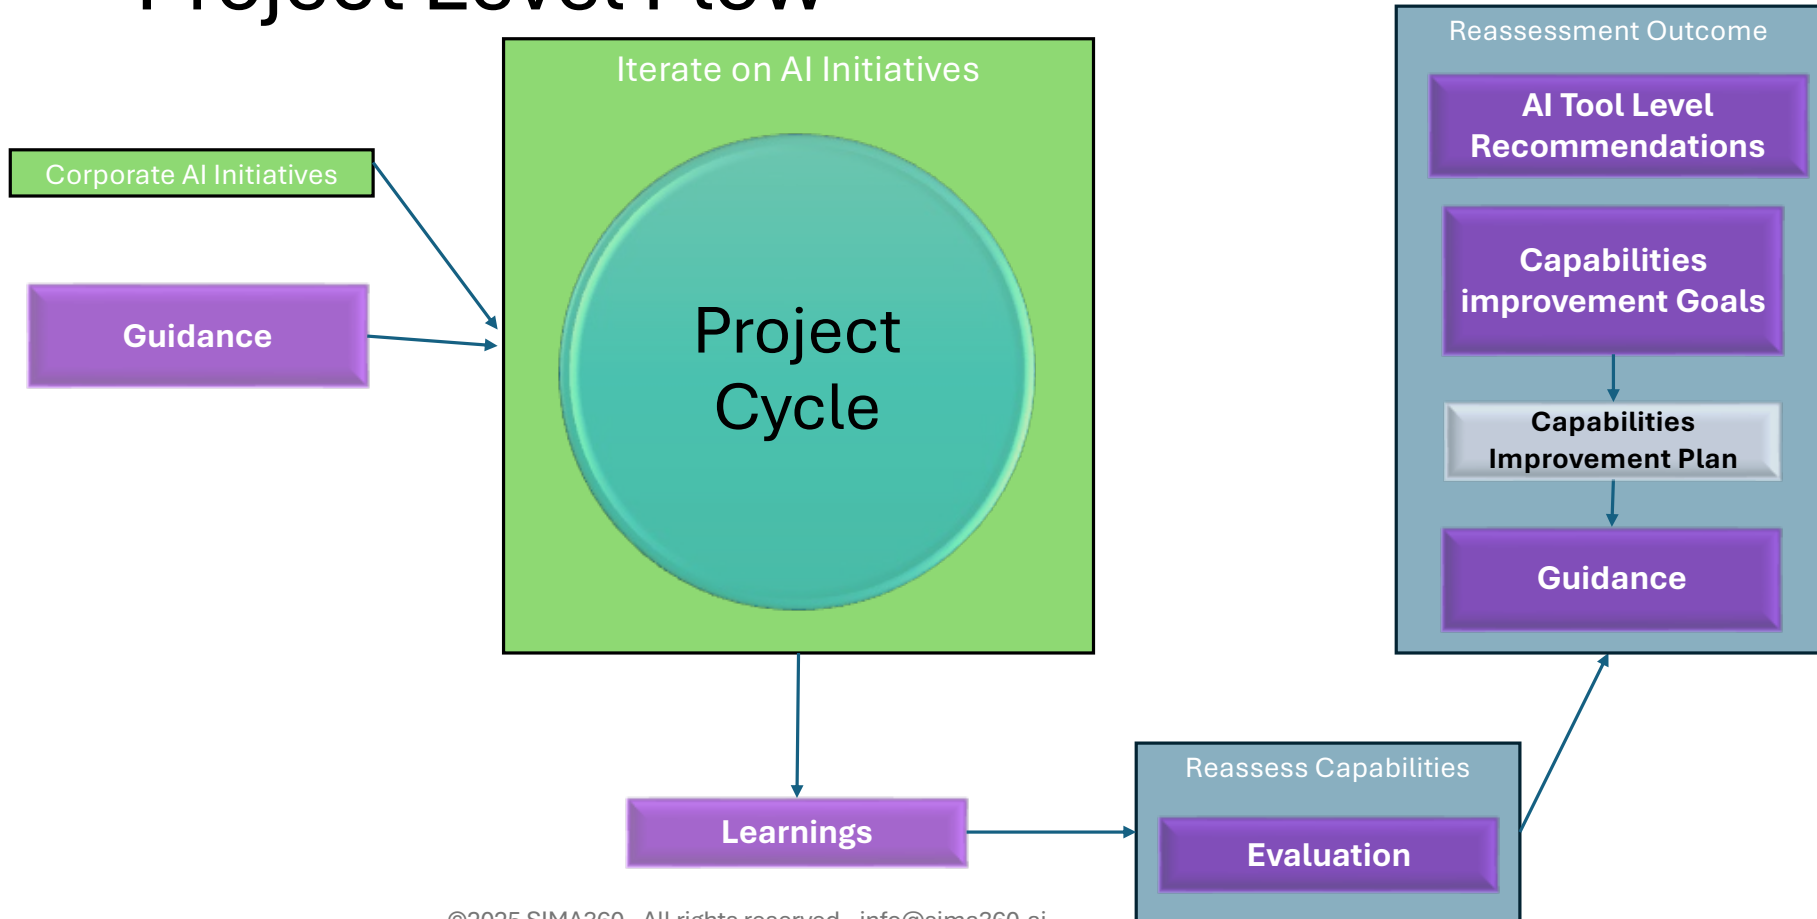

Yes

No

Project Level Flow

What project cycle is best?

Analyze, design, code, test

Yes

No

Something close to Plan Do Check Act

Yes

No

An existing approach for development
(like agile)

Yes

No

A cycle executed multiple times

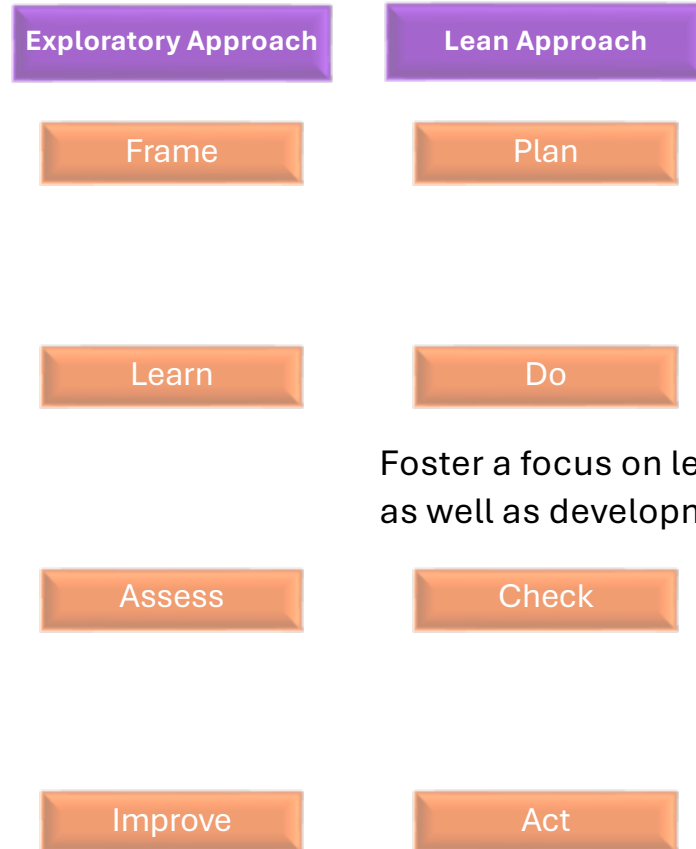

Yes

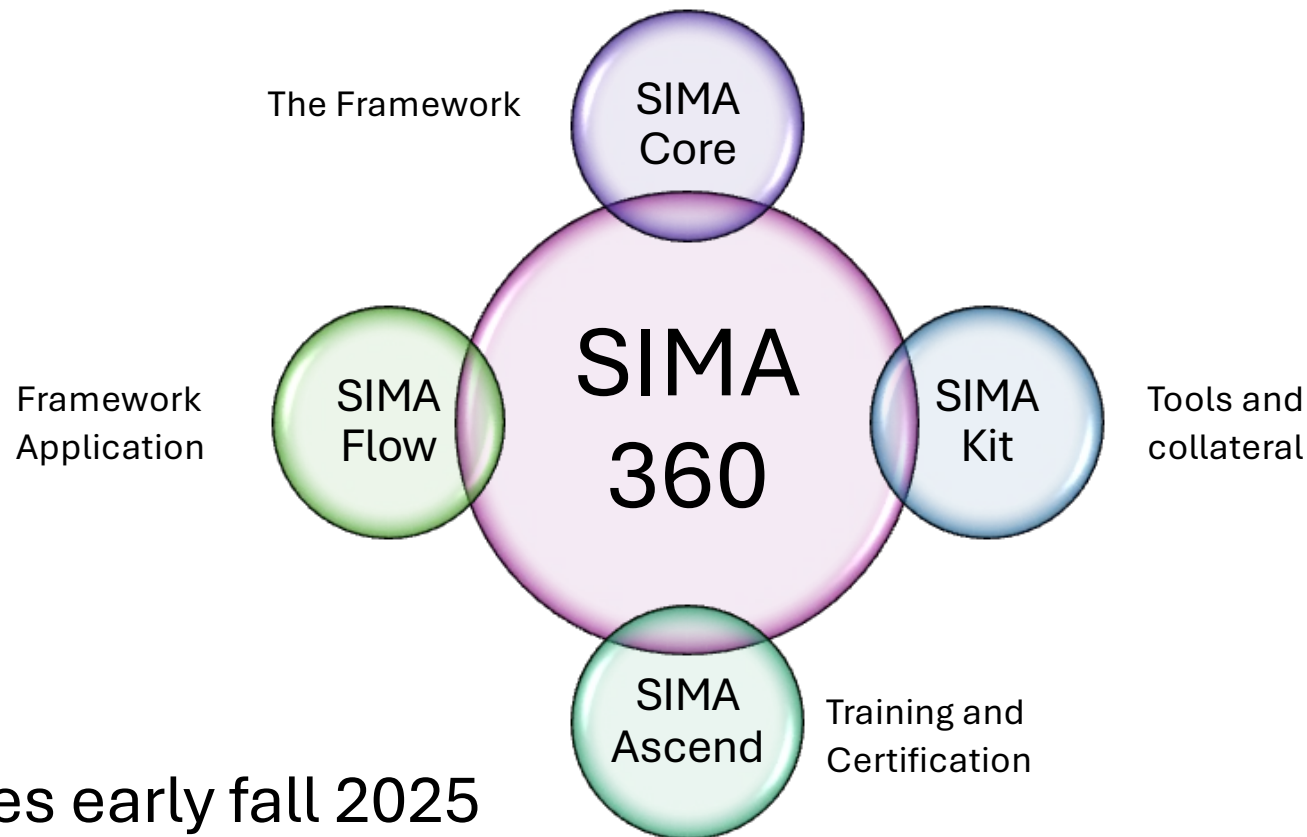

No

Project Cycle

SIMA-360: Structured AI Maturity Accelerator

Launches early fall 2025

SIMA 360: Structured AI Maturity Accelerator

Do you want to pay for the framework

Yes

☐

No

Do late adopters have to pay for anything?

☒

Yes

☐

No

Can consulting companies use it to help clients?

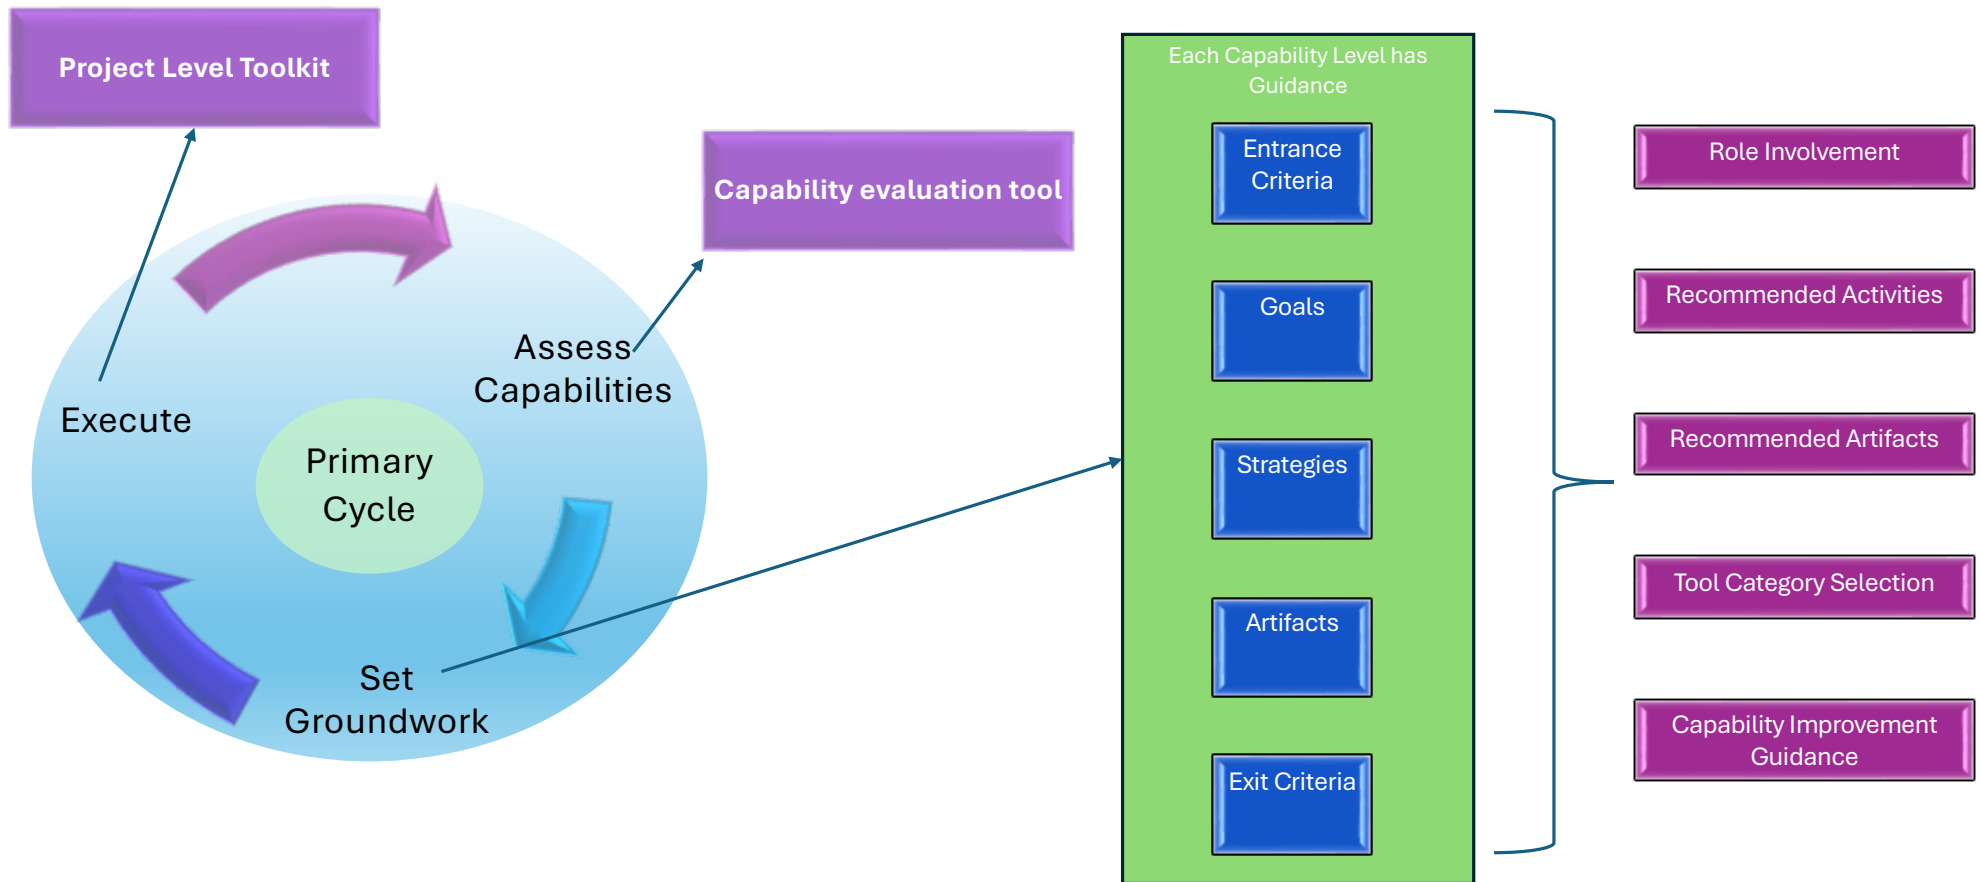

☒

Yes

☐

No

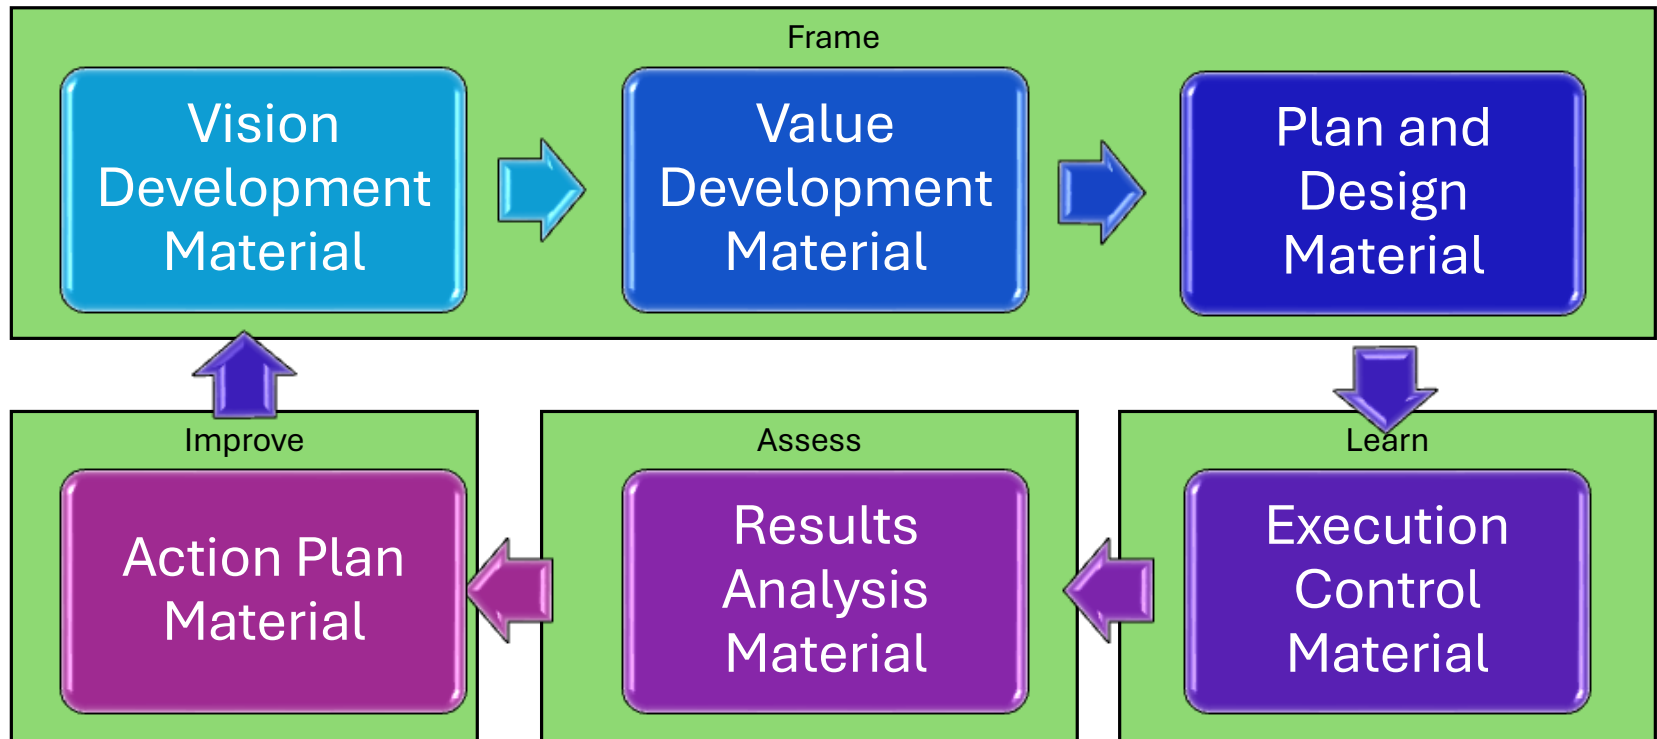

SIMA Kit Capability Level Toolbox

SIMA Kit Project Level Toolbox

FLAI: Frame, Learn, Assess, Improve

SIMA Ascend Certification Path

Certification Levels

Certified AI Solutions Agent

Certified AI Solutions
Orchestrator

Certified AI Solutions Strategist

Purpose

Equip individuals using the framework with the tools and knowledge to apply it effectively.

Equip team-level leaders with the tools and knowledge to guide and support others in applying the framework.

Equip organizational leaders with the tools and knowledge to promote, staff, teach, and continuously improve the framework.

Courses

- Applying AI Solutions and
- Preparing for AI Solutions

- Leading AI Teams

- Developing Organizational AI Strategies or
- Business Support for AI Initiatives

SIMA-360: Structured AI Maturity Accelerator
